

IDG500-C6012 4G CBRS WAN Extender

Functions:

- Plug & Play, providing capability for existing Ethernet-based equipment to connect effortlessly to a CBRS OnGo network.
- Instantly create LTE-based WAN connection options for various IP networks, including enterprise, industrial IoT, manufacturing, and in-building networks.
- Enable primary or backup WAN connection for IP networks. Expand network fail-over option at single WAN between LTE and Ether-WAN. Dual SIMs allow connectivity fail-over between different networks or MNOs.
- Compact and easy solution integration. Provides high-speed Cat-6 LTE and two Ethernet LAN ports. Micro-SD option for local storage. The built-in 802.11n WiFi feature is an ideal solution to provide WiFi access to 5~10 WiFi clients at the same time.
- Support for multiple VPN technologies enabling VPN tunnel with remote site providing a secure connection for data transmission.
- IPv4/IPv6 protocol stack meeting ISP requirements. Gateway based on IP pass through or DHCP based NAT with Port Forwarding. Rich routing function covers static and dynamic options compatible with most IP networks.
- Web-UI for basic settings. CLI and Command Script for advanced settings. TR-069 used with AMIT-NMS for multi-site management. SNMP option for popular network management tools.

Application Description:

1. Building a private LTE network prevents paying monthly fee to mobile operators.
2. Independent and closed network make it more secure for transmitting sensitive data.
3. Operate at 3.5GHz CBRS spectrum with less interference and no additional cost.
4. AMIT CBRS Routers transform a Ethernet-based device into a CBRS device.
5. Plug & Play, no need to change any configuration on existing Ethernet devices.
